Perfect Ten
Throw your Numbers

Shout "Bingo!" And empty your card.

Play the famous game of chance with sighted and non-sighted friends.

Goals

To read and add numbers together.
To improve communication skills in a social game setting.

The adult prepares

- 2 baseplates with a number sign in the top left corner.
- All of the number bricks
- 1 bowl

Create a Bingo card with a baseplate for each player: write 3 numbers (between 1 to 17) on each one, ensuring there are no duplicate numbers.

Place the remaining bricks in the bowl.

Designate a player to be the Bingo Caller.

The children play

- 1 Ask the Bingo Caller to pick 2 bricks from the bowl and read the 2 numbers aloud.

- 2 Tell the other players to add the 2 numbers together and check their Bingo card for the sum.

If a player has the number, tell them to shout "Bingo!" and remove the number. The first player to find all 3 numbers wins.

The first player to find all 3 numbers wins.

Facilitation tips

- Remind the Bingo Caller to speak loudly and clearly so that all players can hear the correct numbers.
- To make the activity easier, omit the math operation – players just listen for single numbers.
- Vary the type of math operation to make it more difficult.
- Change the number of bricks on the base plate or/and the number of bricks picked from the bowl.
