## Throw them high and see how much you get!

The bricks fall in the lid. Ignore all the «broken» numbers: bricks upside down, fallen on their side, or outside the lid. Add the numbers on remaining bricks together.

### Goals

To practise addition, with a fun maths activity.

### The adult prepares

- 10 number bricks in a bowl
- The toolkit lid

### The children play

- 1 Tell the child to take all the bricks in their hands and throw them in the air, trying to land them on the lid.

- 2 The child picks up any bricks that have fallen upside down or sideways and puts them back in the bowl.

They add up the numbers on the bricks that have fallen right side up in the lid.

### Facilitation tips

- Tell the child to throw more (or fewer) bricks.
- Only count the even numbers (or odd numbers).
- Subtract the numbers on the bricks that fall outside the lid, from the total inside the lid.
